The Problem

The "Creative Fatigue" Crisis

The Fatigue Crisis

The Scale

Thousands of ads across 36+ advertisers needing constant monitoring.

The Decay

Ads lose effectiveness over time, costing thousands in wasted spend.

The Black Box

Marketers know **what** failed, but they don't know **why**. Data lacks visual context.

The Goal: Bridge Visual Assets & KPIs

Your Mission

Pick your Poison

Choose Your Path

Performance Explorer

Cross-dimension analysis (Country/OS/Format).

Fatigue Detection

Predict when a creative is about to "die."

Explainability

Use CV/LLMs to explain why an image works.

Recommendation

Scale, Pause, or Pivot suggestions.

Clustering

Group creatives by visual similarity to find patterns.

Your Mission

Examples

Example: "Fatigue Detection"

- **Example Input:**
  - **Time-series performance data:** Daily spend, CTR, and CVR.
  - **Creative Metadata:** Campaign start date and historical benchmarks.
- **Example Pipeline:** A model or anomaly detection identifying when performance drops below a standard deviation relative to launch.
- **Example Output:**
  - **Actionable Insight:** A "Creative Health" score (0-100%).
  - **Recommendation:** "Pause ad" or "Pivot creative" suggestion.

Your Mission

Examples

Example: "Explainability"

- **Example Input:**
  - **Raw Image/Video Assets**.
  - **Performance Metrics:** High-performing vs. low-performing labels based on KPI data.
- **Example Pipeline:** Use a Computer Vision model to extract features such as "Call to Action" (CTA) button color or text density. Feed these visual features into an LLM to generate a natural language explanation.
- **Example Output:**
  - **Insight**: Ads with 'Play Now' buttons in neon green perform 15% better in this category.
  - **AI Copilot Chat**: A conversational answer explaining why a specific asset is successful.

Prototype & Demo

Show us how a marketer uses your tool.

Output Formats

Interactive Web App

Dashboard interface for real-time campaign management.

AI Copilot

Conversational assistant for rapid insight generation.

Data Storytelling

Interactive Notebooks explaining the "Why" behind performance.

Focus: Usability & Decision-Support

Prioritize clear actions over "black-box" complexity.

Prototype & Demo

hy" behind performance.

Focus: Usability & Decision-Support

Prioritize clear actions over "black-box" complexity.

But above all: surprise us!

Be creative!

Evaluation

Scoring the Win

Criteria for Success

Usefulness

Does it help an advertiser make a better decision (scale, pause, pivot, ...)?

Clarity

Are the insights easy to understand at a glance through an app or notebook?

Technical Quality

Is the architecture smart enough to handle thousands of ads across hundreds of advertisers?

Creativity

Does the solution surprise the user with novel features or visionary storytelling?

Bonus: Visionary Insight

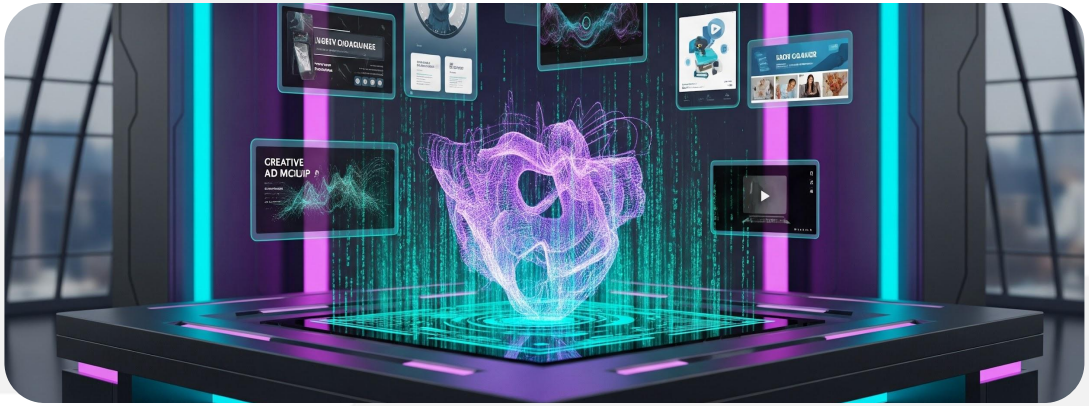
Combining image analysis with Performance Data to unlock the "Why". Bridge the gap between the Creative Director and the Data Scientist.

Summary

The Smadex Challenge

smadex by entravision

Build the Future of AdTech



Build the next Creative Copilot for mobile advertisers

Grab the dataset. Start hacking. Make data visible.
